SUMMARY

Senior Machine Learning Engineer with 4+ years delivering production NLP, LLM, and agentic AI systems in healthcare and insurance domains. Proven track record of building scalable ML pipelines, self-hosting open-source LLMs on multi-node GPU clusters, and driving measurable operational impact across cross-functional teams. Experienced across Azure, Databricks, and GCP environments with a strong foundation in distributed systems and end-to-end ML delivery.

WORK EXPERIENCE

AltaML, Edmonton, AB

Senior Machine Learning Developer

Oct 2025 – Present

- Architected agentic AI workflows on the company's proprietary platform using LangGraph and MCP (Model Context Protocol), enabling LLM agents to autonomously orchestrate multi-step tasks across external APIs and services — reducing manual intervention in complex workflows.
- Owned backend integration for a client-facing community platform, designing OAuth2/JWT authentication flows, token lifecycle management, and user attribution across distributed service layers to meet enterprise security requirements.
- Applied distributed systems patterns — including Postgres-backed task queues, server-sent events, and idempotent write-back with human-in-the-loop checkpoints — to harden ML pipelines for production reliability.

Machine Learning Developer II

May 2024 – Sept 2025

- Delivered end-to-end NLP systems generating \$1M+ in annual operational savings per deployment across healthcare and insurance clients.
- Built scalable PySpark pipelines processing PDFs, images, and speech-to-text outputs, serving as the data foundation for downstream ML systems.
- Drove a 20% improvement in model accuracy through systematic feature engineering, dataset curation, and iterative experimentation.
- Led and mentored a 3-person team to deliver LLM-powered medical summarization systems into production, owning technical direction and stakeholder communication.

Machine Learning Developer

May 2022 – Apr 2024

- Fine-tuned custom LLMs for configuration code generation and industrial narrative automation, reducing manual authoring time for domain-specific content.
- Developed ML and deep learning models for time-series forecasting and LiDAR point cloud classification across industrial and infrastructure clients.
- Delivered production solutions across Azure, and GCP — adapting to client-mandated cloud environments while maintaining consistent delivery quality.

Lifting Solutions Inc, Edmonton, AB

Client Solutions Engineer, EIT

Feb 2020 – Apr 2022

- Led preparation of technical and commercial proposals for international tenders for Oil and Gas equipment (Progressive Cavity Pumps and Endless Rods) across Oman, India, Australia, and Canada.
- Executed CAD \$4M+ in orders within 2 years, standardizing project order execution processes across product lines.
- Collaborated with operations, marketing, supply chain, and executive stakeholders to solve business challenges during international expansion.

EDUCATION & CERTIFICATION

B.Sc., Mechanical Engineering Co-Op

University of Alberta, Edmonton, AB

Sept 2013 - Apr 2018

GPA: 3.86/4.0

Microsoft Azure Data Scientist Associate

2023 - Active

Google Cloud Professional Machine Learning Engineer

2023 - Active

SKILLS

- **Languages:** Python, PySpark, SQL
- **LLM Ecosystem:** Llama, Mistral, OpenAI API, Anthropic API, LangGraph, MCP (Model Context Protocol), LangSmith
- **ML & LLM Frameworks:** Hugging Face Transformers, PyTorch, TensorFlow
- **Architectures:** RAG, Hybrid Search, Agentic Workflows, Fine-Tuning
- **Infrastructure & MLOps:** Databricks (Delta Lake, Model Serving), MLflow, Docker, Azure, GCP

VOLUNTEER AND LEADERSHIP

Edmonton Data Society

Director

2024 – Present

- Led strategic planning and event programming for Edmonton's data science and ML practitioner community, fostering professional development and knowledge sharing across the local tech ecosystem.
